

Students,

Happy summer, but we must make sure we keep our minds strong in our mathematics ability.

You know the drill! Write the problem, show your work, box your answers. Some problems you will need to verify why you chose that answer, make sure you are showing your work.

On word problems, you must show ALL five steps. You don't have to write the problem, just show and LABEL

1. Set up Variable
2. Write equation (some they are asking for an expression)
3. Solve or simplify
4. Check your work
5. State your answer

Make sure to be neat and work hard!

Completing all of the problems neatly to the best of your ability 125/100!

Completing all of the odd problems neatly to the best of your ability 90/100!

Starting the year off like this will be great! We will have a 100pt test covering this the Third day of school as we will review it and cover questions during the first two days.

Enjoy yourselves but continue to build and maintain your mathematical abilities!! Do a little each day!

Mrs. Langford
